CUNNTAS

DO

SHÉAMAS DE BÚRCA, AIRE UM RIALTAS AITIÚIL.

A CHARA,

I have the honour to submit my Annual Report on the Marriages, Births and Deaths registered in Saorstát Éireann, during the year 1924.

In this Report, as in that for the preceding year, the Births and Deaths shown for the various administrative areas are corrected for those occurring in institutions.

The presentation of the figures for the years 1923 and 1924 in this manner adds to their value, both from statistical and administrative points of view. Further improvements could, however, be effected if more accurate information of the existing population were available than that afforded by Estimates for years so far removed from the date of the latest Census (1911).

GENERAL SUMMARY.

In connection with the vital statistics of Saorstát Éireann in 1924 as compared with 1923 increases in the number of births and deaths, and reductions in the number of marriages and emigrants, are shown.

The marriages registered during the year under review numbered 14,822, being 810 less than the number in 1923 and 879 less than the average for the ten years 1914-23.

There were 63,402 births, equal to 20·06 per 1,000 of the estimated population, as compared with a rate of 19·49 per 1,000 for 1923 and 20·05 per 1,000 for the ten years 1914-23. The number for 1924 shows an increase of 1,712 as compared with that for the preceding year.

The number of deaths was 45,180, or 14·29 per 1,000 of the population, the rate for 1923 being 13·34 per 1,000 and the average for the ten years (1914-23) 15·55 per 1,000.

Tuberculosis caused 4,582 deaths, equivalent to 1·45 per 1,000 of the population, as against 4,468 deaths and a rate of 1·41 per 1,000 in 1923, the latter being the lowest mortality from tuberculosis ever recorded.

The number of deaths from cancer in 1924, viz., 2,903, with a rate of 0·92 per 1,000, is higher than that for any year of the preceding decennium. The number shows an increase of 173 as compared with that for 1923 and of 286 in comparison with the average for the decennium.

To heart diseases 4,792 deaths were attributed. This number, 149 above that recorded for 1923, is equivalent to a rate of 1·52 per 1,000 of the population.

Deaths from bronchitis numbered 2,926 or 60 above those recorded for 1923, but 948 under the average for the ten years 1914-23. Pneumonia caused 2,667 deaths, being 565 above the low number registered in 1923, but 112 under the average (2,779).

The infant mortality in 1924 for the entire area was 72 per 1,000 births, which was 6 per 1,000 above the record low rate for 1923, viz., 66 per 1,000. The rate for rural areas was 55 per 1,000 and for urban areas 104 per 1,000 births.

TABLE I.—Showing for each of the years 1914-24 the estimated Population* of SAORSTÁT ÉIREANN area; the number of MARRIAGES, BIRTHS and DEATHS registered, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years, 1914-1923; also particulars relating to Northern Ireland for the year 1924.

EMIGRATION.

From returns kindly furnished by the Ministry of Industry and Commerce (Department of Statistics) Saorstát Éireann, it would appear that the number of emigrants from Saorstát Éireann to “places out of Europe and not within the Mediterranean Sea” during the year 1924 was 19,077, including 12,016 bound for the United States, 5,237 for British North America, 1,138 for Australia, 192 for New Zealand, 160 for British South Africa, 112 for India, and 222 for other countries.

The estimated number of emigrants in 1923 was 20,570.

MARRIAGES.

During the year 1924 the marriages registered in Saorstát Éireann numbered 14,822, being equivalent to a rate of 4·69 per 1,000 of the estimated population; this rate is 0·25 below that for the previous year, but 0·27 below the average for the ten years, 1914-23.

Of the 14,822 marriages, 13,835 were of Roman Catholics, as compared with 14,576 in 1923, the remaining marriages numbering 987, as against 1,056 in 1923. Included in the 987 marriages are 709 celebrated according to the rites and ceremonies of the Church of Ireland, as against 752 in 1923; 143 as compared with 154 in 1923, were in Presbyterian Meeting-houses; 54 as against 53 in 1923 in “Registered Buildings” belonging to various religious denominations; 65 by civil contract in the Registrars’ offices, as against 83 in 1923, one was according to the usages of the Society of Friends; and 15 as compared with 9 in 1923, were according to the Jewish rites.

The rate per 1,000 of the estimated Roman Catholic population represented by the number of marriages of Roman Catholics was 4·89, or 0·15 below the corresponding average rate for the preceding ten years, and the rate for other marriages was equivalent to 3·00 per 1,000 of all persons other than Roman Catholics in the population, this rate being 1·27 below the corresponding average rate for the ten years, 1914-23.

TABLE II.—MARRIAGES registered in Saorstát Éireann area in 1924, and in each of the previous ten years, according to the MODES OF CELEBRATION; with the rate per 1,000 of the population represented thereby.

1919	1,125	239	99	117	3	9	1,592	15,609	17,201	4·77	5·44	5·37
1920	1,140	205	96	161	—	19	1,621	15,655	17,276	4·84	5·43	5·37
1921	970	180	88	155	—	9	1,402	13,700	15,102	4·17	4·75	4·69
1922	856	154	78	127	—	11	1,226	13,915	15,141	3·73	4·92	4·79
1923	752	154	53	83	5	9	1,056	14,576	15,632	3·20	5·14	4·94
Early Average 1914-1923	1,003	190	80	122	2	10	1,407	14,294	15,701	4·27	5·04	4·96
1924	709	143	54	65	1	15	987	13,835	14,822	3·00	4·89	4·69

It will be found from the figures given in the Abstract of Marriages, pages 6-7, that 91·2 per cent. of the total marriages were those of bachelors and spinsters; that 5·2 per cent. were those of widowers and spinsters; that 2·5 per cent. were marriages of bachelors and widows; and that those of widowers and widows formed 1·1 per cent. of the total marriages. Thus, of the men married 6·3 per cent. were widowers, and of the women 3·6 per cent. were widows, or in 10 instances in every 100 marriages, one or both of the contracting parties had been in the married state before.

A rough test of the progress of elementary education in Saorstát Éireann is afforded by the signatures of the contracting parties in the marriage registers or certificates. In the year 1924 there were 14,525 or 98·0 per cent. of the husbands, and 14,660, or 98·9 per cent. of the wives, who wrote their names, and the remainder signed by "mark," as against 15,268, or 94·3 per cent. of the husbands, and 15,660 or 96·7 per cent. of the wives in the year 1914.

Table XV supplies the rates per 1,000 of the population represented by marriages in the provinces, counties and county boroughs.

BIRTHS.

The number of births registered in Saorstát Éireann during the year 1924 was 63,402 (boys 32,713 and girls 30,689) equivalent to 20·1 per 1,000 of the estimated population, which was also the average of the ten years, 1914-23.

The rate represented by the births registered in Northern Ireland was 22·3 per 1,000 of the estimated population; in England and Wales, 18·8; and in Scotland, 21·9.

For the combined county boroughs and urban districts in Saorstát Éireann, the rate per 1,000 of the population during the year 1924 was 25·8 and for all rural districts it was 18·1 (Table XVI).

In 1924 the proportion of male infants born alive in Saorstát Éireann to every 1,000 females was 1,066; in 1923, 1,065; in 1922, 1,065; in 1921 it was 1,056; in 1920 it was 1,067; in 1919 it was 1,069; and in 1918 the proportion was 1,040 males to every 1,000 females.

Of the 63,402 births registered during the year 61,725 or 97·4 per cent. were legitimate, and 1,677, or 2·6 per cent. were illegitimate, the proportions being the same as those for each of the three preceding years.

For the province of Leinster illegitimacy in 1924 amounted to 3·2 per cent. of the total number of births for that province; Munster 2·7 per cent.; Connaught 1·2 per cent., and Ulster (part of) 2·5 per cent., as compared with 3·3 per cent., 2·5 per cent., 1·3 per cent., and 2·5 per cent. respectively, in 1923.

The male children born in wedlock numbered 31,865 and the female 29,860 or 1,067 of the former to every 1,000 of the latter, and of the illegitimate children 848 were males and 829 females, or 1,023 boys to every 1,000 girls.

It should be stated that the illegitimate birth-rate for Saorstát Éireann compares favourably with that for most other countries.

For the province of Leinster the birth-rate was 22·5 per 1,000 of the population (Census 1911); for Munster 19·6; for Connaught 18·1, and for Ulster (part of) 18·0.

The following statement shows the total number of infants, by sexes, whose births were registered during each quarter of 1924:—

—	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	Total.
Males	8,355	8,555	8,434	7,369	32,713
Females	7,634	8,012	7,998	7,045	30,689
Total	15,989	16,567	16,432	14,414	63,402

Of the total births 51·3 per cent. were registered in the first six months (182 days) and 48·7 per cent. in the second six months (184 days).

MULTIPLE BIRTHS.

The number of twin births registered in Saorstát Éireann during the year 1924 was 815 and the number of triplet births 6. The twin births were 1·29 per cent. of the total births, 1·32 of the single births and 1·30 per cent. of the total mothers, the respective percentages in the preceding year being 1·23, 1·26, and 1·25.

The infants born in wedlock (61,725) as registered in 1924, include 789 births of twins (or 1·30 per cent. of the 60,924 married mothers) and 6 births of triplets, while the illegitimate infants (1,677) include 26 twins, equivalent to 1·57 per cent. of the 1,651 unmarried mothers.

Of the 1,648 infants born alive resulting from multiple births, 815 were males and 833 females.

DEATHS.

The deaths registered in Saorstát Éireann during the year 1924 numbered 45,180, affording a rate of 14·29 per 1,000 of the estimated population. The deaths of males amounted to 22,821, or 14·30 per 1,000 of the estimated number of males in the population, the deaths of females numbering 22,359, equivalent to 14·29 per 1,000 of the estimated female population.

The mortality from all causes in 1924 is 0·95 per 1,000 above that for 1923, and 1·26 per 1,000 below the average for the ten years 1914-23.

The death rate from all causes for Northern Ireland was 15·9 per 1,000, for England and Wales, 12·2 per 1,000 and for Scotland, 14·4 per 1,000.

Table XV., gives the rates from all causes for Saorstát Éireann by provinces, counties and county boroughs.

From this it will be seen that the rate for the province of Leinster was 15·74 per 1,000 of the population of the province, for Munster 13·81 per 1,000, for Connaught 12·29 per 1,000 and for Ulster (part of) 15·36 per 1,000.

The rates for counties and county boroughs varied from 11·40 for Mayo county to 16·83 for Dublin County borough.

For urban areas (county boroughs and urban districts) the mortality from all causes in 1924 was 16·84 per 1,000 of the population and for the rural districts 13·49 per 1,000 (Table XVI.).

The following statement shows, by sexes, the number of deaths of persons registered during each quarter of the year 1924.

—	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	Total.
Males	7,183	6,054	4,626	4,958	22,821
Females	7,351	5,884	4,307	4,817	22,359
Total	14,534	11,938	8,933	9,775	45,180

Of the total deaths 26,472, or 58·6 per cent., were recorded during the first six months and 18,708, or 41·4 per cent., in the second six months.

The annual rate per 1,000 of the population represented by deaths registered in the first quarter of the year was 18·4; in the second quarter, 15·1; in the

third, 11·3; and in the fourth, 12·4, as compared with 18·7, 16·5, 12·3, and 14·7, respectively, for the first, second, third and fourth quarters of the ten years, 1914-23.

DEATHS IN INSTITUTIONS.

The Abstract commencing on page 28 gives particulars relating to deaths by certain causes in institutions in Saorstát Éireann and for each county and county borough. Of the 45,180 deaths, 3,601 took place in infirmaries and general and special hospitals, 1,101 in mental hospitals, 5,879 in county homes and hospitals or in workhouse hospitals, and 34,599 occurred elsewhere. Of the total deaths, 23·4 per cent. occurred in the above-named institutions (8·0 per cent. in infirmaries and general and special hospitals, 2·4 per cent. in mental hospitals and 13·0 per cent. in county homes and hospitals) and 76·6 per cent. occurred elsewhere.

CAUSES OF DEATH.

In the table which follows, the number of deaths from some of the principal diseases are shown for the years 1923 and 1924, also the averages for the ten years, 1914-1923.

CAUSES.	Number of Deaths registered			CAUSES.	Number of Deaths registered		
	Years.		Average 10 years 1914-23		Years.		Average 10 years 1914-23
	1924.	1923.			1924.	1923.	
Enteric Fever ...	123	142	167	Tuberculous Disease ...	4,582	4,468	5,756
Typhus ...	5	19	26	Cancer ...	2,903	2,730	2,617
Measles ...	198	171	312	Heart Disease ...	4,792	4,643	4,958
Scarlet Fever ...	65	66	119	Bronchitis ...	2,926	2,866	3,874
Whooping-cough	621	454	429	Pneumonia ...	2,667	2,102	2,779
Diphtheria ...	186	285	269	Diarrhoea and Enteritis under two years of age ...	515	513	675
Dysentery ...	4	15	19	Puerperal Septic Diseases ...	123	135	133
Influenza ...	2,073	621	2,127	Other Accidents and Diseases of Pregnancy and Childbirth ...	180	162	190
Encephalitis Lethargica ...	55	16	9				
Cerebro-spinal Fever ...	28	17	30				

In the above table the only causes of death in 1924 which compare unfavourably with the averages for the ten preceding years are whooping-cough, encephalitis lethargica and cancer.

The mortality in 1924 showed an increase of 2,963 deaths over that for 1923, deaths from influenza exceed those recorded for 1923 by 1,452 and from pneumonia by 565. Other increases were 173 in cancer, 167 in whooping-cough, 149 in heart disease, 114 in tuberculosis, 60 in bronchitis, 39 in encephalitis lethargica, 27 in measles, 18 in accidents and diseases of pregnancy other than puerperal septic diseases, 11 in cerebro-spinal fever, and 2 in diarrhoea and enteritis of children under 2 years.

On the other hand, deaths from diphtheria in 1924, as compared with 1923, show a decrease of 99, deaths from scarlet fever a decrease of one, deaths from typhus a decrease of 14, deaths from enteric fever a decrease of 19, deaths from puerperal septic diseases a decrease of 12, and deaths from dysentery show a decrease of 11.

According to Table XV., which gives the information by provinces, counties and county boroughs, deaths from the principal epidemic diseases* in Saorstát Éireann in 1924 are represented by a rate of 0·54 per 1,000 of the population, the rates varying from 1·72 per 1,000 for Cork county borough, 1·24 per 1,000 for Dublin county borough, 0·80 for Waterford county borough, and 0·75 per 1,000 for Kerry county to 0·09 per 1,000 for Meath county, 0·09 per 1,000 for Leitrim county, 0·25 per 1,000 for Westmeath county and 0·28 per 1,000 for Sligo county.

Table XVI. shows that the mortality rate from this group of causes for all urban areas (county boroughs and urban districts) was 1·06 per 1,000 of the population, being about 3 times the rate for rural districts—0·36 per 1,000.

* See note * on p. xxxii.

TABLE III.—Showing the number of Deaths from all Causes, from some of the EIREANN during each of the eleven years, 1914-1924, with the average of the estimated Population represented by the number of Deaths from also particulars relating to Northern Ireland for the year 1924.

NOTE.—The Classification of Causes of Death adopted for 1921-4 is in accordance with the International as far as possible, in order to afford comparison with those for 1921-4. The numbers in brackets

YEAR.	Total Number of Deaths.	Enteric Fever (1)	Typhus (2)	Small-pox (6)	Measles (7)	Scarlet Fever (8)	Whooping-cough (9)	Diphtheria (10)	Dysentery (16)	Influenza (11)	Encephalitis Lethargica (23)	Meningococcal Meningitis (including Cerebro-spinal Fever, (24)	Tuberculosis of the Respiratory System (31)	Other Tuberculosis (32-7)	Cancer, Malignant Disease (43-9)	Diabetes (57)	Cerebral Hemorrhage (74)

* Per cent. of total deaths.

ENTERIC FEVER.—To this cause 123 deaths (of males 72 and of females 51), including 3 from paratyphoid fever, were ascribed. The 123 deaths are 19 under the number (142) recorded in 1923, and 44 below the average (167) for the ten years 1914-23. Twenty-nine appertained to urban areas and 94 to rural (see abstract commencing on page 60).

TYPHUS.—Five deaths from typhus were registered, as against an average of 26.

SMALL-POX.—No case of this disease was reported during the year.

MEASLES.—The fatal cases of this disease numbered 198 (of males 101 and of females, 97). This number, which is 27 above the low number recorded during the preceding year, is 114 under the average for the ten years, 1914-23, viz., 312. Of the 198 deaths, 178 were those of children under 5 years of age, including 131 under 2 years.

SCARLET FEVER.—Deaths from this disease amounted to 65 during the year 1924, as compared with 66 in 1923 and an average of 119 for the ten years ending with the latter year. Of the 65 deaths, 27 were those of males and 38 of females.

WHOOPING-COUGH.—Deaths from whooping-cough, which numbered 795 in 1920, fell to 216 in 1921 and 201 in 1922, rising to 454 in 1923, and still further to 621 (equivalent to 0·20 per 1,000 of the population) in 1924.

This number is 192 above the average (429) for the ten years 1914-23. Of the 621 deaths (of males 281 and of females 340) 577 were those of children under 5 years of age, 261 of the latter being deaths of infants under one year of age.

The deaths recorded for urban areas numbered 239 and for rural areas 382, representing 0·28 and 0·17 per 1,000 of the respective populations, as compared with 0·31 and 0·08 per 1,000, respectively, in 1923. Thus the mortality for 1924 in urban areas shows a decrease of about 10 per cent. while that in rural areas has doubled.

DIPHTHERIA.—The number of deaths from this disease (186) which is 99 under the number (285) registered during 1923 is 83 below the average (269) for the ten years 1914-23. The deaths in 1924 comprise 89 of males and 97 of females, and of the 186 deaths 93 were those of children under 5 years of age and 56 were between 5 and 10 years, so that 149, or 80 per cent. of all the deaths from diphtheria were those of children under ten years of age.

DYSENTERY.—To this cause only 4 deaths were attributed, as compared with an average of 19 for the preceding ten years.

DIARRHŒA AND ENTERITIS (Children under 2 years).—The number of deaths of children attributed to this cause during the year 1924 was 515, which number is 2 above that recorded in 1923, but 160 below the average (675) for the decennium, 1914-23.

Of the 515 deaths 308 were those of males and 207 of females. The mortality for 1924 is lower than that for any year of the decennium referred to, with the exception of that for 1922 and that for 1923. The 515 deaths include 207, or 40 per cent. belonging to the county borough of Dublin.

The mortality in 1924 from diarrhœa and enteritis for urban areas based on the births recorded therefor was 16·7 per 1,000 and for rural areas the corresponding rate was 3·6 per 1,000, the respective rates for the preceding year being 17·4 and 3·7.

INFLUENZA.—The number of deaths from influenza registered during the year 1924 was 2,073—deaths of males, 1,005, and of females, 1,068—the rate per 1,000 of the population represented by these figures being 0·66, 0·63 and 0·68, respectively. In 1920 the number of deaths from this cause was 696, in 1921 it was 648, in 1922 it rose to 1,812, falling in 1923 to 621. The number of deaths for 1924 is 54 under the average (2,127) for the ten years, 1914-23.

It should be noted, however, that the highest annual mortalities from influenza ever known, viz., those for the years 1918 and 1919, during which 6,788 and 7,468 deaths, respectively, occurred, are included in this average.

With the exception of that for each of those years the influenza mortality in 1924 is the highest since 1900 during which year 3,512 deaths were registered, equivalent to 1.09 per 1,000 of the population, or 0.43 per 1,000 above the rate for 1924.

The epidemic of 1924 was widespread throughout Saorstát Éireann, especially during the first quarter of the year, about 62 per cent. of the deaths having been recorded in this period. In the second quarter the percentage fell to 28. Thus, about 90 per cent. of all the deaths registered during the year were recorded in the first six months.

About 17 per cent. of the deaths from influenza in 1924 were those of persons under 15 years of age, 16 per cent. were aged 15 and under 45 years, 25 per cent. were those of persons between 45 and 65 years, and 42 per cent. 65 years and upwards. In Ireland in 1900 the respective percentages were 13, 13, 30 and 44, in contrast with 21 per cent. under 15 years, 49 per cent. between 15 and 45 years, 17 per cent. between 45 and 65, and 13 per cent. 65 years and upwards in 1919. It will be seen that, while there is a certain amount of similarity in the age distribution of the deaths from influenza in 1900 and in 1924, the visitation in 1919 presented totally different features in this connection. Only thirty-three per cent. of the deaths in 1924 above referred to were those of persons under 45 years of age, and 67 per cent. were aged 45 years and upwards, whereas a reversal of these percentages is applicable to the mortality in 1919, viz., 70 per cent. under 45 years and 30 per cent., 45 years and upwards.

Of the total deaths (2,073), 840 related to the province of Leinster, equivalent to a rate of 0.72 per 1,000 of the population, 578 to Munster, or 0.56 per 1,000, 298 to Connaught, or 0.49 per 1,000, and 357 were referred to the province of Ulster (part of) affording a rate of 1.08 per 1,000 of the population. Included in the latter are Monaghan county with a mortality of 1.27 per 1,000, Donegal with 1.15 per 1,000, and Cavan county with 0.80 per 1,000.

In the rural areas of the province of Leinster the mortality from influenza in terms of the population averaged 0.74 per 1,000, in Munster rural it was 0.54 per 1,000, in Connaught rural 0.48 per 1,000, and in Ulster (part of) rural 1.09 per 1,000.

The rate for deaths from influenza in towns of 10,000 inhabitants and upwards was 0.62 per 1,000, as compared with a rate of 0.75 per 1,000 for towns under 10,000 population.

The former includes Dublin county borough with a rate of 0.65 per 1,000, Cork county borough 0.39 per 1,000, Limerick county borough 0.55, and Waterford county borough with the comparatively high rate of 1.13 per 1,000 of the population.

Of the 2,073 deaths from influenza in the entire area, 822 were associated with pulmonary complications, and 1,251 were returned as from influenza without qualification or were from that disease complicated with maladies other than pulmonary.

ERYSIPELAS.—There were 32 deaths (14 of males and 18 of females) from this cause, as compared with 38 in 1923.

ACUTE POLIOMYELITIS.—Fourteen deaths were ascribed to this disease, being 7 above the number recorded in the preceding year.

ENCEPHALITIS LETHARGICA.—The fatal cases of this disease, which numbered 4 in 1919, 17 in 1920, 31 in 1921, 19 in 1922, and 16 in 1923, rose to 55 in 1924. Thirty-three of the 55 deaths were of males and 22 of females.

CEREBRO-SPINAL FEVER.—This disease caused 28 deaths (16 of males and 12 of females) or 11 more than the number for 1923, but 2 under the average for the 10 years 1914-23.

OTHER EPIDEMIC DISEASES.—There were 11 deaths from malaria, one death from mumps, and 2 from German measles.

TETANUS.—The number of deaths from this disease was 24, those of males being 20 and of females 4, as against a total of 25 (19 of males and 6 of females) in 1923.

TUBERCULOSIS.

Deaths from all forms of tuberculous disease registered in Saorstát Éireann during the year 1924 numbered 4,582, and of these 2,264 were deaths of males and 2,318 of females. The former number is equivalent to a rate of 1.45 per 1,000 of the total population, the number of deaths of males affording a rate of 1.42 per 1,000 of the estimated number of males, and the deaths of females 1.48 per 1,000 of the estimated number of females in the population, as will be seen from the following Table.

The corresponding rates for all deaths from tuberculosis in Northern Ireland was 1.61 per 1,000 of the estimated population, in England and Wales 1.06 per 1,000 and in Scotland 1.16 per 1,000.

TABLE IV.—Showing by sexes the mortality from tuberculosis during each of the years 1914-23.

YEAR.	MALES.		FEMALES.		TOTAL.		Annual Increase.		Annual Decrease.

* Decrease in 1923 as compared with 1914.

It will be observed from this table that a continuous reduction in the mortality from tuberculosis has taken place in the Saorstát Éireann area year by year, beginning with that for 1918 up to 1923, the rate for the latter year being the lowest recorded for Saorstát Éireann. This low mortality was followed by an increase in 1924, amounting to 114 deaths (42 of males and 72 of females) or 2.6 per cent. As compared with the mortality in 1917, that for 1924 shows a reduction of 31 per cent. for all persons, 33 per cent. for males and 30 per cent. for females.

Of the 4,582 deaths, 3,692 (of males 1,807, and of females 1,885) were caused by tuberculosis of the respiratory system, 256 (of males 129 and of females 127) by tuberculosis of the meninges, 230 (of males 110 and of females 120) of the intestines and peritoneum, 56 (of males 27, and of females 29) of the vertebral column, 63 (of males 35 and of females 28) of the joints, 78 (of males 42 and of females 36) from tuberculosis of other organs, and 207 (of males 114 and of females 93) were caused by disseminated tuberculosis.

While the deaths from tuberculosis of the respiratory system in 1924 show an increase of 168 (80 among males and 88 among females) as compared with 1923, those from other forms of tuberculous disease, numbering 890 (457 deaths of males and 433 of females) exhibit a decrease of 54, consisting of 38 deaths of males and 16 of females.

Included in the 4,582 deaths from tuberculous diseases are 1,768 deaths of persons belonging to urban areas and 2,814 to rural, as compared with 1,773 urban and 2,695 rural deaths in 1923, showing a decrease of 5 in the urban deaths in 1924, and an increase of 119 in the deaths appertaining to rural areas.

The abstracts commencing on page 28 give the details regarding deaths from tuberculosis, by provinces, counties, county boroughs, and urban and rural districts, while Tables XV. and XVI. supply the rates per 1,000 of the population for these areas.

It will be seen from Table XV. that the highest tuberculosis mortality for county or county borough areas related to the following:—Cork county borough (2·41 per 1,000), Waterford (2·22 per 1,000), Louth county (2·14 per 1,000), Dublin county borough (2·09 per 1,000), and Wicklow county (1·76 per 1,000), the counties having the lowest rates in 1924 being Cavan (0·87), Leitrim (0·93), and Tipperary N.R. (0·99).

TABLE V.—Showing the rates per 1,000 of the estimated population represented by deaths from ALL FORMS OF TUBERCULOUS DISEASE at the undermentioned age-periods registered during the year 1924.

Sexes.	RATE PER 1,000 OF THE ESTIMATED POPULATION AT AGES.											
	All Ages	Under 5 years	5-10	10-15	15-20	20-25	25-35	35-45	45-55	55-65	65-75	75 & upwards
Males ...	1·42	1·00	0·45	0·55	1·40	2·43	2·10	1·80	1·99	1·63	0·60	0·09
Females ...	1·48	0·85	0·44	0·89	2·23	2·71	2·43	1·83	1·52	1·00	0·40	0·23
Both Sexes ...	1·45	0·93	0·44	0·72	1·81	2·56	2·26	1·82	1·76	1·31	0·49	0·16

Owing to the length of time that has elapsed since the latest enumeration (1911) of the population and on which the estimated population at each age period is based it cannot be claimed for the above rates that they are trustworthy.

SYPHILIS, &C.—Twenty-two deaths (14 of males and 8 of females) were ascribed to syphilis as compared with 28 in 1923. Of the 22 deaths, 9 were those of infants under one year of age.

Three deaths (all males) were ascribed to other venereal affections.

There were 30 deaths (all males) from general paralysis of the insane; 17 deaths (of males 15, and of females 2) from locomotor ataxy, and 29 deaths (of males 21, and of females 8) from aneurysm.

PURULENT INFECTION, SEPTICÆMIA.—Under this heading 95 deaths were returned, 46 being those of males, and 49 of females, as against 92 in the preceding year.

OTHER INFECTIOUS DISEASES.—Four deaths from mycosis were recorded.

CANCER.—A distinctly upward tendency in the mortality from cancer is one of the notable features of the death statistics of the years 1923 and 1924, as will be seen from Table III., which shows that while the mortality for the years 1914-22 fluctuated but slightly, that for the year 1923 gave an increase of 8 per cent. as compared with 1922, and that for 1924 an increase of 6 per cent. as compared with 1923.

During the years 1882 to 1890, the average annual rate per 1,000 of the mean population of these years, represented by the number of deaths from cancer registered in the Saorstát Éireann area was 0·37, followed by a rate of 0·48 per 1,000 for the ten years, 1891-1900, by 0·68 per 1,000 for the decennium, 1901-10, by 0·82 per 1,000 for the ten yearly period, 1911-20, and by 0·85 per 1,000 for the four years, 1921-24.

It is not possible to say to what extent the increase in the mortality from this cause is due to faulty description of the cause of death in the records of the earlier years. The same objection, however, does not hold with a comparison of the mortality for the four years, 1921-24, with that for the decennium, 1901-10, as it is not thought likely that any more serious leakage, due to inaccurate diagnoses, has occurred in relation to the latter than to the former period.

Consequently, the mortality from cancer in the Saorstát Éireann area during the four years, 1921-24, viz., 0·85 per 1,000, shows a real increase of 25 per cent. as compared with the average annual rate (0·68 per 1,000) for the ten years, 1901-10.

The number of deaths recorded during the year 1924 was 2,903, the deaths of males numbering 1,535, and of females, 1,368. These figures are represented by rates of 0·92 per 1,000, 0·96 per 1,000, and 0·87 per 1,000, respectively.

In Northern Ireland the rate for both sexes was 1·10 per 1,000.

As compared with 1923 (0·91 per 1,000) the mortality among males in 1924 shows an increase of 5 per cent., the increase among females being 7 per cent. on the rate (0·81 per 1,000) in 1923.

Deaths from cancer in urban areas numbered 991 or 1·12 per 1,000 of the population, and in rural areas, 1,912, equivalent to 0·83 per 1,000, as compared with 932 urban deaths (rate 1·06 per 1,000) and 1,798 rural (rate 0·78 per 1,000) in 1923.

The increase in 1924 was, therefore, fairly evenly distributed between urban and rural areas.

Of the 2,903 deaths from cancer, 1,456 were returned as from carcinoma, 117 as from sarcoma, and 1,330 from cancer, malignant disease.

Table VI. shows the number of deaths from cancer, by sexes, ages, and parts affected.

*Including Carcinoma, Sarcoma and Cancer, Malignant Disease.

TUMOURS.—Only tumours definitely stated to have been either non-malignant, or as to which further information was not obtainable, as the result of special enquiries regarding their nature, are included under this heading.

There were 37 deaths from cerebral tumour (of males 21 and of females 16); 13 from tumours of the ovary; 27 from tumours of the uterus; and 45 from tumours of other or unstated sites (10 of males and 35 of females).

The latter included 9 returned as from tumour of the abdomen, 4 of bladder, 3 of mediastinum, 3 of intestine, 3 of kidney, 3 of liver, 2 of pelvis, 2 of thyroid, 2 of breast, one of each of iliac, neck, lung, prostate, thigh, mesentery, spleen, colon, throat, sacrum, jaw, and 3 tumours of other sites unstated.

RHEUMATISM.—There were 82 deaths (40 of males and 42 of females) from rheumatic fever; 293 deaths (115 of males and 178 of females) from chronic rheumatism, osteo-arthritis and gout.

DIABETES.—To this cause 212 deaths were attributed, 128 being deaths of males and 84 of females. The total deaths are 12 under the number (224) for the year 1923, and 24 under the average for the ten years 1914-23.

ALCOHOLISM.—Fifteen deaths were ascribed to alcoholism, and of these 14 were those of males. Cirrhosis of the liver caused 88 deaths, 66 being those of males and 22 of females. All except 2 females were aged 25 years and upwards.

OTHER GENERAL DISEASES.—Among these were 36 deaths from rickets, 165 from pernicious anæmia, 87 from other anæmias and chlorosis, 26 (of males 2, and of females 24) from exophthalmic goitre, 18 from other diseases of the thyroid gland, 23 (8 of males and 15 of females) from diseases of the adrenals, one from disease of the spleen, 25 from leukæmia, 23 from lymphadenoma (Hodgkins' disease) and 2 from chronic poisoning by mineral substances.

MENINGITIS AND ENCEPHALITIS.—Deaths from meningitis (not returned as cerebro-spinal or tuberculous) amounted to 329 (deaths of males numbering 182, and of females, 147) as compared with 309, 163, and 146 respectively, in 1923.

The number of deaths from encephalitis (not returned as encephalitis lethargica), was 32, as against 38 in 1923.

CEREBRAL HÆMORRHAGE.—The number of deaths returned under this heading was 1,329, comprising 593 deaths of males and 736 of females. The latter figures include the deaths of 33 males and 53 females from cerebral thrombosis and embolism.

The 1,329 deaths are 36 below the number recorded in 1923, and 62 under the average for the ten years, 1914-23.

EPILEPSY.—There were 183 deaths (of males 94, and of females 89) from epilepsy, as compared with 174 in the preceding year.

CONVULSIONS.—The number of deaths ascribed to convulsions was 632 (of males 344, and of females 288) and of the 632 deaths, 509, or 80·5 per cent. were those of infants under one year of age, the 509 deaths constituting 11·2 per cent. of the deaths from all causes of infants under one year of age registered in Saorstát Eireann during the year 1924.

HEART DISEASE.—To this group, 4,792 deaths (of males 2,337, and of females 2,455) were assigned, equivalent to a rate of 1·52 per 1,000 of the estimated population, and contributing 11 per cent. to the mortality from all causes. As compared with the number in 1923, viz., 4,643, the number of deaths from heart disease during the year under review is 149 more, and with the average (4,958) for the ten years 1914-23 it is 166 fewer.

Of the 4,792 deaths, 18 were ascribed to pericarditis, 164 to acute endocarditis and myocarditis, 71 to angina pectoris, and 4,539 to other diseases of the heart.

ARTERIAL SCLEROSIS.—Deaths from arterial sclerosis, of which 119 were those of males, and, 83 of females, numbered 202. This number is higher than that recorded for 1923, viz. 150.

BRONCHITIS.—The deaths from this cause numbered 2,926 (of males, 1,375, and of females, 1,551), being equivalent to a rate of 0·93 per 1,000 of the population or 6·5 per cent. of the total number of deaths from all causes. The number of deaths (2,926) is 60 above the number for 1923, which was the lowest ever recorded, and 948 under the average for the ten years, 1914-23. Of the 2,926 deaths, 386 were returned as from acute bronchitis, 598 as from chronic bronchitis and 1,942 as from bronchitis (not otherwise defined).

PNEUMONIA.—Of 2,667 deaths from pneumonia (all forms), affording a rate of 0·84 per 1,000 of the population, 1,225 were from broncho-pneumonia, 263 from lobar pneumonia, and 1,179 from pneumonia (not otherwise defined).

The 2,667 deaths include 1,500 deaths of males and 1,167 of females.

PLEURISY; EMPYEMA.—The number of deaths classed to pleurisy, including deaths from empyema regarding which the originating cause other than pleurisy could not be ascertained, was 119, the males numbering 83, and the females 36.

As the result of inquiries into the causes of 6 deaths as from empyema registered in Saorstát Éireann during the year 1924, 3 were assigned to pneumonia (2 to lobar and one to pneumonia not otherwise defined), 2 to tuberculosis, and one to septicæmia of duodenum.

ULCERS OF THE STOMACH AND DUODENUM.—To these causes, 292 deaths were attributed, 190 being those of males and 102 of females. The total number is 62 above the average (230) for the ten years, 1914-23.

APPENDICITIS AND TYPHLITIS.—The deaths so classified numbered 159 (of males 95, and of females 64) being 20 above the average (139) for the ten years preceding.

CIRRHOSIS OF THE LIVER.—Deaths from this cause, viz., 88 (of males 66, and of females 22) are below those recorded during any of the preceding ten years, and are 58 under the average for that period.

ACUTE AND CHRONIC NEPHRITIS.—The number of deaths from acute nephritis was 124 (72 of males and 52 of females) and from chronic nephritis 938 (496 of males and 442 of females). The total number of deaths from the acute and chronic disease was 1,062, which number is 19 above that for 1923, but 48 below the average for the ten years 1914-23.

PREGNANCY AND CHILDBIRTH.

The mortality of women during pregnancy and childbirth is classified under three headings namely (1) septic conditions (2) intrinsic accidents and diseases of pregnancy and childbirth, and (3) disease or cause associated with pregnancy and childbirth. To the first group 123 deaths were attributed in the year 1924, to the second, 180, and to the third 27; altogether the deaths in Saorstát Éireann of childbearing women numbered 330. This number, which is 2 above that for the year 1923, represents a rate of 5·21 per 1,000 of the total births registered as compared with 5·32 in the year 1923, and with 5·73 per 1,000, the average rate for the decade, 1914-23.

Table VIII. shows that the mortality from puerperal septic diseases fell from 135 in the year 1923 to 123 in 1924, and from accidents of pregnancy and childbirth rose from 162 in 1923 to 180 in 1924. The deaths of women from causes associated with pregnancy and childbirth, which were 31 in the year 1923, fell to 27 in the year under review.

[TABLE

Tables XV. and XVI. give the rates per 1,000 births for (1) and (2) by provinces, counties and county boroughs and groups of urban and rural areas.

TABLE VII.—Showing the number of deaths of women in 1924 definitely returned as either caused by or associated with PREGNANCY or CHILDBEARING.*

VIOLENCE.

Deaths caused by violence, as registered in Saorstát Éireann during the year 1924 amounted to 929, a number equivalent to 0·29 per 1,000 of the estimated population, which number is 460 less than that recorded for 1923, and 433 below the average (1,362) for the ten years 1914-23.

Of the 929 deaths, 96 were classed to suicide, 79 to homicide, 4 to execution, leaving 750 to other deaths by violence, the majority of which were definitely stated to be accidental.

The suicidal cases comprise the deaths of 77 males and 19 females.

Of the 79 homicidal cases, 70 were deaths of males (including 10 infants under one year old) and 9 of females (including 6 infants under one year old). In 52 instances (all males) the deaths referred to homicide were caused by firearms.

The deaths other than those classed to homicide, suicide or execution, include 8 (6 of males and 2 of females) caused by poisons or poisonous gases, and 153 (71 of males and 82 of females) by burns or scalds. Of the 153 deaths caused by burns or scalds, 77 were those of children under 5 years of age.

There were 151 deaths (of males 118, and of females 33) from accidental drowning, 47 deaths caused by injuries due to firearms, of which 43 were those of males and 4 of females; and there were 103 deaths due to injuries caused by crushing (89 of males and 14 of females), including 46 (males 37, and females 9), as compared with 55 in 1923, by motor driven vehicles.

Of the 8 accidental deaths attributed to poisons or poisonous gases, 3 were caused by food, 2 by vegetable alkaloid, and one each by carbolic acid and sheep dip, and in one case the nature of the poison was not stated.

Of 9 suicidal deaths by poisoning, 3 were stated to have been caused by strychnine, and one each by sheep dip, hydrocyanic acid, poisonous liniment, phosphorous, irritant poison, and in one case the nature of the poison was not stated.

UNCERTIFIED CAUSES.

Among the 45,180 deaths registered, 12,208 were not certified by medical practitioners, nor were inquests held into their causes. They constitute 27·0 per cent. of the total mortality in 1924, and an average of 26·4 for the ten years, 1914-23. The number of uncertified deaths in urban areas in 1924 was 4·7 per cent. of the total number of deaths registered therein, the corresponding percentage for rural areas being 37·3.

INQUESTS.

From returns furnished by the registrars it would appear that the number of inquests during the year 1924 was 651, or one inquest for every 69 deaths registered.

AGES AT DEATH.

The following statement shows by sexes, and certain age-periods, the rates per 1,000 of the estimated population represented by deaths from all causes, in Saorstát Éireann, 1924. (See remarks respecting age mortality from tuberculosis, page xvi).

SEXES.	MORTALITY BY AGES AT DEATH PER 1,000 OF THE ESTIMATED POPULATION AT THESE AGES.												
	Under 5 years.	5—	10—	15—	20—	25—	35—	45—	55—	65—	75—	85 yrs. and upwds.	All ages.
Males ...	26·48	2·42	1·80	2·92	4·47	4·72	6·11	14·50	28·00	40·63	97·80	272·73	14·30
Females ...	22·57	2·26	2·05	3·52	4·44	5·12	7·23	12·95	24·52	36·21	102·72	248·67	14·29
Persons ...	24·57	2·34	1·93	3·21	4·46	4·92	6·65	13·74	26·23	38·26	100·33	260·10	14·29

Of the 45,180 deaths at all ages, 6,889, or 15·2 per cent. were deaths of children under 5 years of age, including 3,796 deaths of males, or 16·6 per cent. of the male mortality at all ages, and 3,093 deaths of females, or 13·8 per cent. of the total number of deaths of females.

The deaths of 20,374 persons aged 65 years or upwards were registered during the year 1924, constituting 45·1 per cent. of the total number of deaths at all ages, and include 9,897 of males, or 43·4 per cent. of the total deaths of males, and 10,477 of females, or 46·9 per cent. of the deaths of females at all ages.

Among the deaths of persons at these ages 16,525, or 36·6 per cent. of the total deaths were 70 years of age or over.

Deaths of persons aged 95 years or upwards numbered 283 (of males 136, and of females 147) and they include 61 (males 25 and females 36) whose ages at death were returned as 100 years or upwards.

The ages in detail of the persons whose deaths were registered in the year 1924 are given in the Abstracts commencing with page 8.

INFANT MORTALITY.

The number of deaths of infants under one year of age registered in Saorstát Éireann during the year 1924 was 4,543, equivalent to a rate of 72 per 1,000 births, as compared with 66 per 1,000 in 1923 and an average of 78 for the ten years 1914-23.

The deaths of male infants numbered 2,575, being equal to 79 per 1,000 births of males, and the deaths of female infants, 1,968, or 64 per 1,000 births of females, the corresponding rates for 1923 being 73 and 60 respectively.

For Northern Ireland the infant mortality in 1924 was 85 per 1,000 births; for England and Wales, the rate was 75 and for Scotland 98 per 1,000 births.

From Table X., which gives the infant mortality rates for Saorstát Éireann, by sexes, ages and causes, it will be seen that atrophy, debility, marasmus (20·27 per 1,000) convulsions (8·02), pneumonia (7·26), diarrhoea and enteritis (7·03), premature birth (6·59), and bronchitis (4·74) in the aggregate, are equivalent to 53·91 per 1,000 births, or about 75 per cent. of the total infant mortality.

Of the deaths of infants, 36·6 per cent. were under one month old, 11·8 per cent. between one and two months; 9·5 per cent. between 2 and 3 months; 17·8 per cent. were aged 3 and under 6 months, and 24·3 in every 100 were 6 and under 12 months old.

Urban and Rural Mortality.

There were 2,265 deaths of infants recorded for urban areas, equivalent to 104 per 1,000 births, the number of such deaths in rural areas being 2,278, or 55 per 1,000 births. Thus, the mortality in urban areas is nearly twice that in rural areas.

A reference to Table XI. shows that, although the mortality in rural districts is low, the rate for urban areas of 10,000 inhabitants and upwards is high, viz., 108 per 1,000 births. The urban areas which contribute to this result are:—Dublin Registration Area, including Dublin county borough (125), with a rate of 118, Cork county borough (94), Limerick county borough (96), Waterford county borough (94), and the urban districts of Galway (88), Dundalk (69), Drogheda (69), Wexford (58), Sligo (102), Kilkenny (87), Tralee (83), and Clonmel (87).

Deaths of infants in 1924, in towns of less than 10,000 inhabitants were equivalent to a rate of 89 per 1,000 births.

The following statement gives the infant mortality for each sex for urban and rural areas:—

Statement showing the INFANT MORTALITY per 1,000 Births, by sexes, and at different periods of life in 1924, in relation to urban and rural areas.

AGES.	SAORSTÁT ÉIREANN						All Urban Areas.			All Rural Districts.

Under one year	107·83	121·25	93·96	58·22	63·24	52·81	103·92	116·18	90·99	54·75	59·24	49·94

The rate for deaths of infants under one year old for Belfast in 1924 was 85 per 1,000 births; for Londonderry, 118; for London, 69; for Liverpool, 102; for Edinburgh, 89; and for Glasgow, 119.

In connection with the ages at death, as disclosed by Table XII., the marked difference in the mortality in urban and rural areas at each age period is shown and especially at one month old and upwards.

The following statement shows the proportion per cent. of the total mortality of infants for urban and rural areas at the different ages:—

Ages.	SAORSTAT EIREANN.		URBAN AREAS.		RURAL AREAS.	
	No. of Deaths.	Per cent. of Total Deaths under One Year.	No. of Deaths.	Per cent. of Total Deaths under One Year.	No. of Deaths.	Per cent. of Total Deaths under One Year.
Under One Month ...	1,664	36·6	748	33·0	916	40·2
1 and under 2 months ...	534	11·8	250	11·0	284	12·5
2 „ 3 „ ...	434	9·5	228	10·1	206	9·0
3 „ 6 „ ...	808	17·8	415	18·3	393	17·3
6 „ 12 „ ...	1,103	24·3	624	27·6	479	21·0
Under One Year ...	4,543	100·0	2,265	100·0	2,278	100·0

The above table shows the high relative frequency of deaths under one month old, and the low relative frequency at the age-period 6 to 12 months, in the rural as compared with urban areas.

Of the total deaths under one year of age 40·2 per cent. under one month old in the rural areas, and 25·3 per cent. were under 7 days old, as compared with 33·0 per cent. and 17·7 per cent., respectively, in the urban areas (see Table XII.). These figures follow on the lines of those for 1923 in the Report for which year it was observed that, as a high proportion of the deaths were uncertified, possibly many more deaths occurred in the rural areas than would have been the case if proper attention was forthcoming at or shortly after birth.

DEATHS OF ILLEGITIMATE INFANTS.

The number of deaths of illegitimate infants under one year of age registered in Saorstát Eireann during the year 1924, was 529, consisting of 280 deaths of males and 249 of females. Based on the number of illegitimate births registered, the resulting mortality rate is 315 per 1,000 births for both sexes, 330 per 1,000 for males and 300 per 1,000 births for females, as compared with 344, 375, and 311, respectively, in 1923. These rates must be regarded as excessive.

It may be stated that the illegitimate infant mortality as derived from the records for 1924, is about 5 times the mortality among legitimate infants, which was 65 per 1,000 births for both sexes, 72 per 1,000 for males, and 58 per 1,000 births for females:

In other words, one out of every 3 illegitimate infants born alive in 1924, died before the completion of its first year of life.

In Northern Ireland in 1924, the illegitimate infant death-rate was 188 per 1,000 births; and in England and Wales, the illegitimate infant death-rate was

133 per 1,000 births, or about one death to every 8 illegitimate infants born alive. This rate is about twice that for legitimate infants, and it may be said that this proportion is maintained for that country yearly from 1906 onwards.

Table XIII. shows for the whole of Saorstát Éireann the number of deaths by causes and at different periods of life under one year of age. On account of the smallness of the numbers it was not considered desirable to calculate rates for each age and cause for one year only. Rates are, however, given for all causes and for each age period. It would appear from this table that at every period of life, the mortality among illegitimate infants is much in excess of that for all infants, as shown in Table X., especially at the age-periods one and under 2 months and 2-3 months.

It will be seen from Table XIV. that 225, or nearly 43 per cent. of the total number of deaths of illegitimate infants occurred in Dublin county and city. Of the 63 deaths in the county, 48 took place in institutions, and 15 elsewhere, and of the 162 city deaths, the corresponding numbers were 118 and 44. Thus, 59 of the 225 deaths in Dublin county and city did not occur in institutions. Of the latter, 27 were described in the registers of deaths as "nurse children," 22 of these occurring in the city, and 5 in the county.

TABLE IX.—Showing for Saorstát Éireann, by certain causes the MORTALITY AMONG INFANTS UNDER 12 MONTHS old, per 1,000 Births registered in the eleven years 1914-24.

The striking features of the weather in the year 1924 were as follows:— January, an open month, but unpleasant by reason of clouds, dampness and frequent rainfall; an after winter of some severity in February; a cold very dry March; an unduly cold April, and a snowstorm on the 13th; May showed an average mean temperature, a frequent rainfall, much cloudiness, with a consequent shortage of sunshine and a high relative humidity; an “Atlantic” June of south-west and west winds, clouds and showers.

July was a cloudy, rainy, and generally unsettled month, with a mean temperature (59.5 deg.), nearly a degree below the average (60.4 deg.). In fitting sequel, August showed clouded skies—70 per cent. of cloud—which interfered with solar radiation by day and terrestrial radiation by night, so causing a diurnal range of temperature of only 10.9 deg. September was a cool month of heavy rains, including 1.570 inches on the 7th, and 1.173 inches on the 19th. October proved a month of average mean temperature, with a small diurnal range of 9.9 deg., and frequent, but not heavy rains. November was a very open month, the mean temperature being 47.3 deg. or 1.8 deg. above average. December was almost frostless—in fact, the screened thermometer did not fall lower than 34.2 deg. in the city of Dublin. Fogs prevailed in the early part of the month, and the closing days were tempestuous in the extreme.

The rainfall was 31.575 inches, or 4.205 inches above the average annual measurement of the thirty-five years, 1881-1915, inclusive, viz., 27.370 inches.

In 1924 there were 209 “rain-days,” or days upon which not less than .005 inch of rain (five-thousandths of an inch) was measured. This was 11 days more than the average number of rain-days in the thirty-five years 1881-1915, inclusive (198). In 1868 and 1887—the warm dry years of recent times—the rain-days were only 160, and in 1870 they were only 145. A millimetre of rain—roughly 0.04 inch—fell on 153 days in 1924.

The rainfall in the first six months of 1924 was 11.783 inches on 93 days. In the second six months it was 19.792 inches on 116 days.

Particulars kindly furnished by the Director, Meteorological Office, London, regarding meteorological observations taken at the Ordnance Survey Office, Phoenix Park, Dublin, are published in my Quarterly Returns of Marriages, Births and Deaths.

Mise, le meas,

WILLIAM J. THOMPSON,

Ard-Chláruidhe.

Oifig um Chlárú Ghenearála,

Tigh Charlemont,

Baile Atha Cliath,

19adh lá de mhí Deireadh Foghmhair, 1925.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1924.

SUPERINTENDENT REGISTRARS' DISTRICTS, BY COUNTIES.*

[Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, less than the deaths to the extent stated.]

Note.—This Statement (III.) has been constructed by adding the Births registered up to the middle of each year to the Population as ascertained at the Census of 1911, and deducting the number of Deaths registered and of emigrants enumerated. Some adjustments covering the years 1915–21 were made as regards the movements of British Military. The populations given in the above statements from 1841 to 1921 include the latter.

INDEX TO SUPERINTENDENT REGISTRARS' DISTRICTS.

[The following Index furnishes a reference to the NUMBER or NUMBERS of each Superintendent Registrar's District in the Tables of Abstracts contained in the Report, in which the numbers run consecutively from 1 to 130.]
